

Company Dashboard

Operational & project status across the GSM portfolio — one page for the executive team

1

EVERY SHOW REPORTS

Weekly per venue: occupancy vs commitment · ticket revenue vs model · operating burn vs Gate 1 · guest satisfaction. Numbers enter once, at the source.

2

EVERY PROJECT REPORTS

Per project: gate status · spend vs curve (from Cash-to-Cash) · milestone health · vendor commitments vs CDA check. Straight from the tools the teams already use.

3

ONE DATA LAYER

The same Neon base behind every module — indicators, projects, scenarios, portfolio, operations. No copy-paste reporting; the dashboard reads what the tools already know.

4

THE CEO PAGE

Portfolio on one screen: every show's occupancy & revenue trend, every project's gate & cash position, exceptions first. Fresh badges — nothing ages silently, same rule as Market Intelligence.

5

THE BOARD VIEW

A printable monthly pack generated from live data: performance vs the constraint sheets the board approved. The loop closes — promises made in the model are tracked in operations.

How to read it

Shows (1) and projects (2) feed one shared data layer (3) — the same base the whole toolbox runs on. The CEO works from the exceptions-first page (4); the board gets the same truth in a printable pack (5). The strategic loop closes: model → constraints → vendors → operations → back to the model.
